

Drip Irrigation Kits

Dayliff Drip Kits are available for all crop drip irrigation applications and are supplied in basic kits for quarter acre or 1000m² area installations (1,500m² for Wide spacings), the modular design being expandable to larger areas with the use of multiple kits. Principal features are as follows:-

- Three basic kit specifications are available for drip line installations with Close spacing (50cms), Standard spacing (100cms) and Wide spacing (300cm) depending on crop requirements
- Kits include all components for a complete installation including HDPE start connectors and end caps for each drip line. Drip lines are supplied separately in 1000 metre rolls. Also included is the main HDPE supply pipe, a suitable screen filter and necessary valves and fittings
- Standard 16mm high UV resistant LDPE drip lines with integral Emitters at 20cm, 30cm or 100cm spacings. Individual Emitter output is 1.2 l/hr at 15m pressure

Most common crops are suitable for these kits including leafy vegetables, tomatoes, onions, melons, garlic and orchards with drip spacings being determined by the crop requirements, farmer preference and the shape of the irrigated area.

Kits are supplied in convenient packaging complete with component lists and a step by step installation instruction guide. Unique application packages are also available with different emitter spacings and flows according to specific user requirements.

Dayliff irrigation Drip Kits are simply installed, durable and effective and provide optimal drip irrigation solutions for all crop applications.

Kit Type	Irrigation Area	Line Spacing	Emitter Spacing	Total Line Length	Water Flow	Suitable Crops
Close Spacing	1000m ²	50cm	20cm	2000m	12m ³ /hr	Cabbage, Kale, Onion, Garlic, Spinach, Lettuce
Standard Spacing	1000m ²	100cm	30cm	1000m	4m ³ /hr	Tomato, Melon, Capsicum, Cucumber, Potato
Wide Spacing	1500m ²	300cm	100cm	500m	3m ³ /hr	Banana, Avocado, Citrus, Trees
